I am opposed to the elimination of the morse code requirement for an  $\mbox{\sc Amateur}$ 

Radio License at the General and Amateur Extra Class levels. As a volunteer

examiner, I have noticed that the majority of people examined have memorized

the question pool, but have no idea what the questions and answers mean. They have simply learned that if they get a certain question, then they select the

appropriate answer (even thought they understand neither the question nor

the correct answer). Also, I believe that with the ability to pass the 5 Words Per

Minute CW test either by 25 straight character copy (one minute of solid copy) or by the

10 "fill-in-the-blank" questions that applicants have established a fairly good

record of passing the CW test. I also believe that a basic understanding of  $\ensuremath{\text{CW}}$ 

operations is important for emergency communications. I am also opposed to

further allocating more HF frequencies and types of emissions in the HF  $\mbox{\sc spectrum}$ 

for Technician Class licensees. The Technician Class license is intended to be

an entry level license to amateur radio operations and, therefore, an encouragement

to Technician Class licensees to gain more knowledge of the art and practice of

amateur radio in order to obtain higher class licenses and privileges. I oppose this

petition on the grounds of consolidation of license classes (and therefore privileges)

and that Technicians already have CW privileges on 10 meters and 50 MHz and  $\,$ 

above. The FCC should retain the 5 WPM Code requirement and license classes

in their present form. I am opposed to raising the morse code requirement for any

class of license above the present 5WPM. However, I am not opposed to the part

of the petition that would give Technicians and Technician Plus the same  $\mathtt{CW}$ 

operation privileges on HF with no phone privileges. I agree that the technical

levels of the examination questions on both the General and Amateur  ${\tt Extra}$  Class

examinations should be increased.

Dr. John F. Teer

Amateur Radio Operator AK5Z
